

ENERGY AND SUSTAINABILITY

What is Energy and Sustainability?

- Energy and Sustainability involves conserving, protecting, and sustaining resources to create healthy, high-performing facilities. It brings real-world challenges and solutions into the classroom while fostering community engagement to address climate change.
- Key areas of focus include waste management, recycling, energy and water consumption, and efficiency initiatives across Norfolk State University.
- Energy and Sustainability are essential to achieving goals in efficiency, resilience, reliability, economic stability, environmental health, and social equity.
- On campus, this means designing and implementing efficient, eco-friendly, and socially just systems that support both current and future generations.
- To position NSU as a leader in Energy and Sustainability, continuous funding is crucial to maintain and improve sustainable practices.

As a Spartan, you can lead the change on campus. By pursuing your passion for Energy and Sustainability, you can help make Norfolk State University the Campus of the 21st Century and beyond!
